

# SUPPORT RECYCLING

- Production of one ton of paper from recycled paper can save up to two trees.

# NOT TO CUT RAIN FORESTS

- They are lungs of the planet.
- Each year is destroyed area of tropical forests, which is larger than the size of the State of New York.

# RENEWABLE SOURCES

## Maximum use of renewable resources:

- **WATER** - water power station
- **WIND** - wind power station
- **SUN** - solar power

Water power

Wind power

Solar power

# SUITABLE TECHNOLOGIES

Utilizing suitable technologies in industry, agriculture and building  
Environmentally - friendly, producing minimum of waste and recycle  
this waste

- industry - waste water cleaning plants, separators on chimneys
- agriculture - limit using fertilizers and pesticides

# NOT TO EXPORT WASTE

- Not to export (dangerous) waste to developing countries

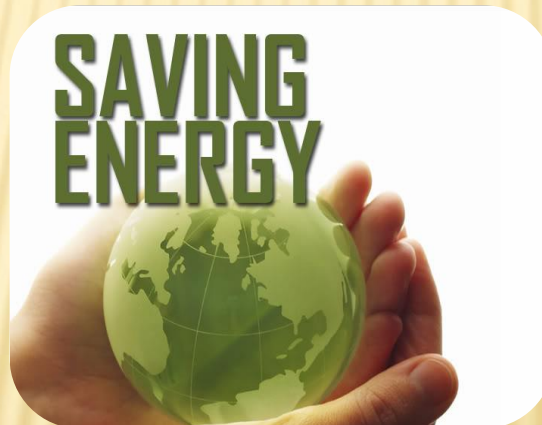

# NOT TO DUMP WASTE INTO SEA

- Not to dump waste into sea - keep the seas clean
- In the Pacific the eighth continent of garbage has grown, it is bigger than France and growing

# SAVING RESOURCES

- Support saving resources by individuals and companies - water, energy and materials.

# INTERNATIONAL ORGANIZATIONS

- Support cooperation of international environmental organizations
- For example : Children of Earth

# EDUCATION OF PEOPLE

- Support education of people - only educated people realize that it is necessary to save our environment for the future generations.
