

sustainable Development

- The main objectives include preservation of the environment to future generations in good condition

- **-INDIVIDUAL**

- - should reduce consumption by not buying unnecessary things

◎ WASTE SORTING !

- recycling in containers - carton, white glass, colour glass, paper and plastic containers

- dangerous waste - there are batteries unused medicine to the pharmacy and electrical appliances; biological waste - COMPOST; clothes container

- ◎ SAVE WATER AND ENERGY (in house) !
 1. Heating - well-chosen insulation, use of solar energy and efficient heating systems
 2. Hot water - reduce the consumption of water (bath, shower) and through more efficient use
 3. Lighting - use of daylight and saving light bulbs
 4. Cooling - it is necessary to place the fridges or freezer away from heat sources

- ◎ PREFER LOCAL PRODUCTS (food, etc)
 - you will save the environment by reducing traffic
 - local people will get jobs

- ◎ BUY GOOD QUALITY GOODS (clothes, furniture, electrical appliances)
- ◎ - they will serve longer time and then you can recycle them

◎ PRIORITY TO RENEWABLES

- energy from the sun:

1. wind energy = wind power
2. energy of the Earth-Moon = tidal power
3. energy from the earth = geothermal energy

- less non-renewable resources, such as fossil fuels (coal, oil, natural gas, peat, ...)

◎ PROTECT NATURE AND LANDSCAPE !

- do not discharge garbage in nature and in public places, do not make illegal dumps

THANK YOU FOR YOUR ATTENTION !
